

Response to Office Action

This application is primarily claiming the One-Piece low profiled pavement Marker as shown in FIGS. 3 thru 6 of the "Drawing Replacement Sheets 2 and 3" which were mailed to your respectful Office on 02/15/2005.

The present "Method Claim" distinctly claims the apparatus in FIGS. 3, 4, 5 and FIG.6 of the Drawing Replacement Sheets.

The Marker of the present invention have the following distinct features:

1. Integrally having "**two Rows**" of load carrying structural Walls, [Claim 8, lns2 and 3], where as Patent # 6,811,729 has no structural walls, only independent "**Posts**", thereby allowing the on-site injection of resinous liquid adhesive simultaneously filling and bonding the Marker to the substrate. Whereas, the marker of present invention does not need "structural fill system".
2. The Marker of the present invention has vertical sides and back surfaces, as shown in [FIGS.3, 4, 5 and 6 of the Replacement Sheets], whereas No -729 claims (Marker 5) having two reflective faces 12, sagged top 12c with open hole 9 for in-place resin injection and arcuate sides with hand grips, as show in FIGS. 38, 39 and 40 of Patent No. -729 and described in detail on page 12, lns. 45-65 of said Patent # -729.

Therefore, the presently claimed Art is distinctly having its originality and added Matters.

The present Apparatus is ideally suited as a snow plowable Insert marker or a miniature One-Piece Reflective pavement marker, as shown in the Drawing Replacement Sheets FIGS. 3 through 6.

Therefore, it **can not be considered** as an obvious type of double patenting over claim 1 of Patent No. -729.

Sincerely

ADIL ATTAR
